

Sample Online Course TEKS Alignment

TEKS Alignment

Knowledge & Skills	Student Expectation	Bloom's Level		TEKS Alignment Evidence	Recommendations
		Guideline	Observed		
(2 A 1) The student uses properties and attributes of functions and applies functions to problem situations.	(A) identify the mathematical domains and ranges of functions and determine reasonable domain and range values for continuous and discrete situations; and	Understand			
	(B) collect and organize data, make and interpret scatterplots, fit the graph of a function to the data, interpret the results, and proceed to model, predict, and make decisions and critical judgments.	Create			
(2 A 2) The student understands the importance of the skills required to manipulate symbols in order to solve problems and uses the necessary algebraic skills required to simplify algebraic expressions and solve equations and inequalities in problem	(A) use tools including factoring and properties of exponents to simplify expressions and to transform and solve equations; and	Apply			
	(B) use complex numbers to describe the solutions of quadratic equations.	Understand			
(2 A 3) The student formulates systems of equations and inequalities from problem situations, uses a variety of methods to solve them, and analyzes the solutions in terms of the situations	(A) analyze situations and formulate systems of equations in two or more unknowns or inequalities in two unknowns to solve problems;	Analyze			
	(B) use algebraic methods, graphs, tables, or matrices, to solve systems of equations or inequalities; and	Apply			
	(C) interpret and determine the reasonableness of solutions to systems of equations or inequalities for given contexts	Understand			
(2 A 4) The student connects	(A) identify and sketch graphs of	Understand

algebraic and geometric representations of functions.	parent functions, including linear ($f(x) = x$), quadratic ($f(x) = x^2$), exponential ($f(x) = a^x$), and logarithmic ($f(x) = \log_a x$) functions, absolute value of x ($f(x) = x $), square root of x ($f(x) = \sqrt{x}$), and reciprocal of x ($f(x) = 1/x$);				
	(B) extend parent functions with parameters such as a in $f(x) = a/x$ and describe the effects of the parameter changes on the graph of parent functions; and	Understand			
	(C) describe and analyze the relationship between a function and its inverse.	Analyze			
(2A.5) Algebra and geometry. The student knows the relationship between the geometric and algebraic descriptions of conic sections.	(A) describe a conic section as the intersection of a plane and a cone;	Understand			
	(B) sketch graphs of conic sections to relate simple parameter changes in the equation to corresponding changes in the graph;	Apply			
	(C) identify symmetries from graphs of conic sections;	Understand			
	(D) identify the conic section from a given equation; and	Understand			
	(E) use the method of completing the square.	Apply			
(2A.6) Quadratic and square root functions. The student understands that quadratic functions can be represented in different ways and translates among their various	(A) determine the reasonable domain and range values of quadratic functions, as well as interpret and determine the reasonableness of solutions to quadratic equations and	Evaluate

representations.	inequalities;				
	(B) relate representations of quadratic functions, such as algebraic, tabular, graphical, and verbal descriptions; and	Remember			
	C) determine a quadratic function from its roots or a graph.	Evaluate			
(2A.7) Quadratic and square root functions. The student interprets and describes the effects of changes in the parameters of quadratic functions in applied and mathematical situations.	((A) use characteristics of the quadratic parent function to sketch the related graphs and connect between the $y = ax^2 + bx + c$ and the $y = a(x - h)^2 + k$ symbolic representations of quadratic functions; and	Apply			
	(B) use the parent function to investigate, describe, and predict the effects of changes in a , h , and k on the graphs of $y = a(x - h)^2 + k$ form of a function in applied and purely mathematical situations.	Evaluate			
(2A.8) Quadratic and square root functions. The student formulates equations and inequalities based on quadratic functions, uses a variety of methods to solve them, and analyzes the solutions in terms of the situation.	(A) analyze situations involving quadratic functions and formulate quadratic equations or inequalities to solve problems;	Analyze			
	(B) analyze and interpret the solutions of quadratic equations using discriminants and solve quadratic equations using the quadratic formula;	Analyze			
	(B) analyze and interpret the solutions of quadratic equations using discriminants and solve quadratic equations using the quadratic formula;	Analyze			
	(C) compare and translate between algebraic and graphical	Analyze

	solutions of quadratic equations; and				
	(D) solve quadratic equations and inequalities using graphs, tables, and algebraic methods.	Apply			
(2A.9) Quadratic and square root functions. The student formulates equations and inequalities based on square root functions, uses a variety of methods to solve them, and analyzes the solutions in terms of the situation.	(A) use the parent function to investigate, describe, and predict the effects of parameter changes on the graphs of square root functions and describe limitations on the domains and ranges;	Evaluate			
	(B) relate representations of square root functions, such as algebraic, tabular, graphical, and verbal descriptions;	Remember			
	(C) determine the reasonable domain and range values of square root functions, as well as interpret and determine the reasonableness of solutions to square root equations and inequalities;	Apply			
	(C) compare and translate between algebraic and graphical solutions of quadratic equations; and	Analyze			
	(D) determine solutions of square root equations using graphs, tables, and algebraic methods;	Apply			
	(E) determine solutions of square root inequalities using graphs and tables;	Apply			
	(F) analyze situations modeled by square root functions, formulate equations or inequalities, select a method, and solve problems; and	Analyze			

Sample Online Course TEKS Alignment

	(G) connect inverses of square root functions with quadratic functions.	Evaluate			
(2A.10) Rational functions. The student formulates equations and inequalities based on rational functions, uses a variety of methods to solve them, and analyzes the solutions in terms of the situation.	(A) use quotients of polynomials to describe the graphs of rational functions, predict the effects of parameter changes, describe limitations on the domains and ranges, and examine asymptotic behavior;	Apply			
	(B) analyze various representations of rational functions with respect to problem situations;	Analyze			
	(C) determine the reasonable domain and range values of rational functions, as well as interpret and determine the reasonableness of solutions to rational equations and inequalities;	Apply			
	(D) determine the solutions of rational equations using graphs, tables, and algebraic methods;	Apply			
	(E) determine solutions of rational inequalities using graphs and tables;	Apply			
	(F) analyze a situation modeled by a rational function, formulate an equation or inequality composed of a linear or quadratic function, and solve the problem; and	Create			
	(G) use functions to model and make predictions in problem situations involving direct and inverse variation.	Apply			
(2A.11) Exponential and logarithmic functions. The student formulates equations and	(A) develop the definition of logarithms by exploring and describing the relationship between	Apply
